

**B. Sc. Part - III**

**Syllabus for B.Sc. III Nanoscience and Technology (Entire) introduced from June, 2020**

**Course Structure:**

**B.Sc. III Semester - V**

Sr. No.	Theory			Practical		
	Paper Code	No. of lectures/Week	Credits	Paper Code	No. of lectures/Week	Credits
<b>Compulsory Papers</b>						
1.	BNTT-501	3	2	BNTP-508	4	2
2.	BNTT-502	3	2	BNTP-509	4	2
3.	BNTT-503	3	2	BNTP-510	4	2
4.	BNTT-504	3	2	BNTP-511	4	2
<b>Elective Papers (Any One)</b>						
5.	BNTT-505	3	2			
6.	BNTT-506					
7.	SECC-BNTT-507	2	1	SECC-BNTP-512	4	2
8.	AECC-2	2	2			
<b>Total of Sem V</b>		19	13		20	10
<b>Total No. of Credits for Semester V = 23</b>						

**B.Sc. III Semester - VI**

## B.Sc. Nanoscience and Technology

### Semester - V

Paper Code	Title of Paper
BNTT-501	Mathematical Physics, classical Mechanics and Quantum Mechanics
BNTT-502	Organic & Inorganic chemistry
BNTT-503	Fundamentals of Enzymology and Nanoenzymology
BNTT-504	Science at nanoscale: Synthesis of Nanomaterials
BNTT-505	Environmental Science
BNTT-506	Application of nanomaterials: Carbon Nanostructures
SECC-BNTT-507	Skill Enhancement compulsory paper- Scientific Paper Writing
AECC-2	English
BNTP-508	Physical Science Lab
BNTP-509	Chemical Science Lab
BNTP-510	Biotechnology Lab
BNTP-511	Nano Science Lab
SECC-BNTP-512	Project

### Semester - VI

Paper Code	Title of Paper
BNTT-601	Solid state physics, Nuclear Physics
BNTT-602	Physical and Organic chemistry
BNTT-603	Molecular biology and genetic engineering
BNTT-604	Science at nanoscale: Properties of Nanomaterials
BNTT-605	Nanomedicine
BNTT-606	Application of Nanomaterials: Nanocatalysis
SECC-BNTT-607	Skill Enhancement compulsory paper- Scientific Paper Writing
AECC-2	English
BNTP-608	Physical Science Lab
BNTP-609	Chemical Science Lab
BNTP-610	Biotechnology Lab
BNTP-611	Nano Science Lab
SECC-BNTP-612	Project

**B.Sc. III Semester V**  
**BNTT - 501: Mathematical Physics, classical Mechanics and**  
**Quantum mechanics**  
**(Lectures: 45, Credit- 2)**

**Course objectives : Students should :**

- 1] Learn basic calculus for classical and quantum mechanics.
- 2] Study complete numbers.
- 3] Study infinite series for the quantum mechanical approach.
- 4] Study classical mechanics and its application
- 5] Learn rigid body motion
- 6] Study quantum mechanical behavior of the particle

**Unit - 1 :**

**[13 Lectures]**

**Partial Differential Equation**

Introduction to differential equations, Method of separation of variables for solving second order partial differential equations, Form of two dimensional Laplace differential equation in Cartesian coordinates and its solution,

**Integral calculus and infinite series**

Integration in vector field, line and surface integrals revision, double integrals, area, moments and centers of masses, double integration in polar form. Infinite series, Fourier series. Practice exercise

**Unit - 2 :**

**[10 Lectures]**

**Complex Analysis**

Revision of complex numbers and their graphical representation: Geometrical representation, Equal complex numbers, Addition, Subtraction, Multiplication and Division of complex number by geometry..

**Matrices and Determinants.**

Introduction, types of matrices, matrix inverse, determinants, transformation on matrices, special matrices, symmetric asymmetric matrices, orthogonal matrices, unitary matrices, practice exercise.

**Unit - 3 :**

**[12 Lectures]**

**Lagrangian Formulation**

Constraints, Degrees of freedom, Generalized coordinates, Principle of virtual work, D'Alembert's principle, Lagrange's equation from D'Alembert's principle, Applications of Lagrange's equation to a particle in space, Atwood's machine and a bead sliding on uniformly rotating wire under force free condition.

**Techniques of Calculus of Variation**

Hamilton's principle, Deduction of Hamilton's principle from D'Alembert's principle, Deduction of Lagrange's equation from Hamilton's principle, Applications-shortest distance between two points in a plane, Brachistochrone problem.

**Unit - 4 :**

**[10 lectures]**

**Operators in Quantum Mechanics**

Definition of an operator, Position operator ( $x$ ), Linear momentum operator ( $p$ ), Commutation relation in quantum mechanics, Commutation relation between  $x$  and  $p$ , Kinetic energy operator ( $T$ ), Hamiltonian operator ( $H$ ), Parity operator ( $\hat{P}$ ), Angular momentum operator ( $L$ ) – components of angular momentum operator in Cartesian coordinate system, Ladder operators, Eigen values of  $L_z$  and  $L^2$  (use equations for  $L^2$  and  $L_z$  in spherical polar coordinates).

**Reference Books**

1. Schaum's Advanced calculus, Robert C. Wrede, Murray Spiegel, Tata McGraw Hill publication, 3<sup>rd</sup> edition, 2010
2. A First course in Differential Equations with Modeling Applications, Dennis G.Zill, Richard Stratton, 10<sup>th</sup> edition, 2013.
3. Partial Differential Equations, Gupta Malik and Mittal, Pragati Publication, 11<sup>th</sup> edition, 2010
4. Differential Equations, Ramachandra Rao, H. R. Anuradha, Universities press 1996
5. Transforms and Partial Differential Equations, Dr. Manish Goyal, N. P. Bali, Laxmi Publications Pvt Limited, 2009
6. Differential Equations, N.Ch.S.N.Iyengar, Anmol Publications PVT. LTD. October 2002.
7. Mathematical Physics, B. S. Rajput, Pragati Publication 8<sup>th</sup> edition, 1978 Mathematical Methods for Physicists, Arfken, Weber, Elsevier 2005.

## B.Sc. Nanoscience and Technology

8. Mathematical Methods for Scientists and Engineers, McQuarrie, Viva Books 2003.
9. Mathematical Physics, H. K. Das, Rama Varma.S.Chand and company Pvt Ltd 7<sup>th</sup> revised edition ,2014 .
10. Essential Mathematical methods, K. F. Riley, M. P. Habson,Cambridge University Press, 2011
11. Mathematics for Physicists, Susan M.Lea, Belmont, CA : Brooks/Cole-Thomson Learning, 2004
12. Basic training in mathematics - a fitness program for science students- R. Shankar springer science business media new York 1995
13. Thomas calculus, Maurice D Weir,Joel Hass, Frank R Giordano,Pearson Publications,11<sup>th</sup> Edition, 2008
14. Classical Mechanics, Goldstein Herbert, Narosa Publications 2018.
15. Classical Mechanics, Gupta, Kumar and Sharma, Pragati Prakashan .2012
16. Introduction to Classical Mechanics, Nikhil Ranjan Roy, S Chand Publication. 2016
17. Introduction to Classical Mechanics,Takwale R.G., Puranik P.S.,Tata McGraw 1979
18. Classical Mechanics, Panat P.V., Narosa Publication ,2016 .
19. Concepts of Modern Physics, Arthur Beiser, Tata McGraw Hill Education Private Ltd, 6<sup>th</sup> Edition,2003.
20. Classical Electrodynamics, Puri S.P., Tata McGraw Hill Publishing Company Limited, 2011
21. Classical Electrodynamics, Jackson J. D., Wiley India , 2007
22. Electromagnetics, Laud B.B., New Age International. 2011
23. Concepts of Modern Physics, Arthur Beiser, Ahobhit Mahajan, S. Rai Choudhury, Tata McGraw Hill Education Private Ltd, Sixth Edition.
24. Modern Physics, S. L. Kakani and Shubhra Kulkarni, Viva books Private Ltd 2006,
25. Modern Physics, D. L. Sehgal, K. L. Chopra and N. K. Sehgal Sultan Chand & sons, Reprint 1995,
26. Introduction to Modern Physics, F. K. Richtmyer, E. H. Kennard, John N. Cooper, Tata McGraw Hill Education Private Ltd, 6<sup>th</sup> Edition, 1969
27. A Text book of Quantum Mechanics, P.M. Mathews & K. Venkatesan, ,Tata McGraw Hill, 2<sup>nd</sup> Edition.,2010
28. Quantum Mechanics, Leonard I. Schiff, Tata McGraw Hill 3<sup>rd</sup> Edition. 2010.

29. Quantum Mechanics Theory and Applications, A. K. Ghatak and S. Lokanathan, , Macmillan India Ltd, 3<sup>rd</sup> Edition. 1995
30. Quantum Mechanics Theory and applications, Ajoy Ghatak, S. Lokanathan, 5<sup>th</sup> Edition 2017,
31. Quantum Mechanics, Chatwal and Anand , Himalaya Publishing house, Reprint 2010.
32. Quantum Mechanics, Gupta, Kumar, Sharma, , Jai Prakash Nath Publications, 13<sup>th</sup> Edition., 2011
33. Advanced Quantum Mechanics, Satya Prakash, Kedar Nath Ram Nath Meerut Reprint 2011
34. Advanced Quantum Mechanics, B. S. Rajput, Pragati Prakashan 9<sup>th</sup> Edition., 2009.
35. Quantum Mechanics, B. N. Srivastava, Pragati Prakashan Reprint 2011.

**Course Outcomes:**

**Unit - I : After completion of the unit students will be able to:**

- 1] Understand basic differentiation.
- 2] Understand partial differential equations used in study of classical mechanics.
- 3] Generalize functions and their importance with practical approach.
- 4] Develop better understanding of infinite series

**Unit - II : After completion of the unit students will be able to:**

- 1] Understand importance of complex numbers
- 2] Solve problems regarding complex numbers
- 3] Solve various problems using matrices
- 4] Understand different methods of solving mathematical problems

**Unit - III : After completion of the unit Students will be able to:**

- 1] Understand differences between Newtonian mechanics and Lagrangian mechanics
- 2] Solve problems using Lagrangian mechanics
- 3] Understand applications of techniques of calculus of variation

**Unit - IV : After completion of the unit Students will be able to:**

- 1] Identify different operators and their operations on function
- 2] Understand change in functions after using various operators

\*\*\*\*\*

**BNTP-508:Physical Science Lab  
(Credits: 02)**

**Course objective : Student should :**

- 1] Learn practical approach to theoretical formulation
- 2] Study properties of atom using spectroscopy
- 3] Use different software's used for solving quantum mechanical problems
- 4] Determine surface tension.

**Experiments :**

- 1] Resonance pendulum
- 2] Diffraction using auxiliary slit
- 3] Absorption spectrum of a liquid (  $\text{KMnO}_4$  solution)
- 4] Surfaces tension of mercury
- 5] Double pendulum
- 6] Coupled pendulum
- 7] Viscosity using Searle's method
- 8] Problems on Lagrangian mechanics
- 9] Scilab Expt. 1 (problem from Quantum Mechanics)
- 10] Scilab Expt. 2 (problem from Quantum Mechanics)

**Reference Books**

1. Advanced Practical Physics for Students, B. L. Worsnop and H. T. Flint, Asia Publication House, 1971
2. Practical Physics, S. L. Gupta and V. Kumar, Pragati Prakashan, 27th Edition, 2010.
3. An Advanced Course in Practical Physics, D. Chattopadhyay and P. C. Rakshit, New Central Book Agency, 10th edition ,2011
3. Experimental College Physics, White and Manning, McGRAW-HILL Book Company. 3rd edition, 1954
4. B.Sc. Practical Physics , H. Singh and P.S. Hemne, S. Chand Publication, 2014.

## **B.Sc. Nanoscience and Technology**

5. Practical Physics , Arora, S. Chand Publication, 1957

### **Course Outcomes :**

**After completion of experiments, Student will be able to**

- 1] Use various instruments
- 2] Apply theoretical knowledge
- 3] Understand effects of earth's magnetic field
- 4] Calculate quantum mechanical problems using scilab

\*\*\*\*\*

**BNTT - 502: Organic & Inorganic chemistry  
(Lecture 45, Credit- 2)**

**Course Objectives: Students should :**

- 1] Study various types of reagent used in organic synthesis.
- 2] Study various types of name reaction and its mechanism.
- 3] Study Electrophilic addition to  $>C=C<$  and Electrophilic addition to Carbon-Carbon triple ( $-C \equiv C-$ ) bond.
- 4] Study concept of acid and base, also study its strength, principle and application.
- 5] Study Non aqueous solvent.
- 6] Study of Coordination chemistry inorganic mechanism & Crystal field theory (CFT)

**Unit - 1 :**

**[12 Lectures]**

**Reagents and Name reaction in organic synthetic.**

**a] Reagents**

Preparation and Applications of following reagents. Lithium aluminium hydride  $LiAlH_4$ , Raney Nickel. Osmium tetroxide, Selenium dioxide ( $SeO_2$ ). Dicyclohexyl Carbodiimide (DCC). Diazomethane, 2,3 Dichloro -5,6- Dicyano-1,4 benzoquinone (DDQ).

**b] Name Reactions**

Statement, General Reaction, Mechanism and Synthetic applications: Diels -Alder reaction. Meerwein-Ponndorf -Verley reduction. Hofmann rearrangement. Wittig reaction. Wagner- Meerwein rearrangement. Baeyer - Villiger oxidation, Dakin reaction.

**Unit -2 :**

**[12 Lectures]**

**Electrophilic addition to double  $>C=C<$  & triple ( $-C \equiv C-$ ) bond**

**a] Electrophilic addition to  $>C=C<$**

Introduction. Examples of addition reactions. Mechanism of electrophilic addition to  $>C=C<$  bond, orientation & reactivity, Hydrohalogenation. Anti-Markovnikoff's addition (peroxide effect). Rearrangements (support for formation of carbocation). Addition of halogens. Addition of water. Addition of hypohalous acids ( $HO-X$ ). Hydroxylation (formation of 1,2-diols). Hydroboration-oxidation (formation of alcohol) Hydrogenation (formation of alkane). Ozonolysis (formation of aldehydes & ketones).

**b] Electrophilic addition to Carbon - Carbon triple ( $-C \equiv C-$ ) bond.**

Introduction. Examples of addition reactions. Mechanism of electrophilic addition to  $-C \equiv C-$  bond. Addition of halogens. Addition of halogen acids Addition of hydrogen. Addition of water. Formation of metal acetylides.

**Unit - 3 :**

**[10 Lectures]**

**Acids and Bases & Chemistry of Non aqueous Solvents**

**a] Acids and Bases**

Introduction to theories of Acids and Bases-Arrhenius concept, Bronsted-Lowry concept, Lewis Concept, Hard and Soft Acids and Bases. (HSAB Concept), Classification of acids and bases as hard, soft Pearson's HSAB concept. Acid-Base strength and hardness-softness. Applications and limitations of HSAB principle.

**b] Chemistry of Non aqueous Solvents**

Introduction, definition and characteristics of solvents. Classification of solvents. Physical properties and acid base reactions in non- aqueous solvents with respect to liquid sulphur dioxide SO<sub>2</sub>

**Unit - 4 :**

**[11 Lectures]**

**Coordination Chemistry Inorganic Reaction mechanism:**

Introduction, Classification of Mechanism: Association, dissociation, interchange and the rate determining steps. SN1 and SN2 reactions for inert and labile complexes. Mechanism of substitution in cobalt (III) octahedral complexes. Trans effect and its theories. Applications of trans effect in synthesis of Pt (II) complexes. b) Crystal field theory (CFT) Introduction: Shapes of d-orbitals, Basic assumptions of CFT. Crystal field splitting of d-orbitals of metal ion in octahedral, tetrahedral, square planar complexes and John-Teller distortion,

**Reference Books :**

1. Organic Reaction Mechanisms by V K Ahluwalia, R K Parashar 2nd edition 2004
2. Organic Reaction Mechanisms by V K Ahluwalia, R K Parashar Naurosa Publishing House; 3rd Edition 2009.
3. Organic Chemistry by Morrison & Boyd, Pearson Education India. 7th Edn, 2010
4. Organic Chemistry, Jonathan Clayden, Nick Greeves, Stuart Warren, 2nd Edition, Oxford Publisher, 2014.
5. Principles of Inorganic Chemistry; By Puri, Sharma & Kalia, Vishal publication. Co., 33rd ed., 2017.
6. Inorganic Chemistry Gulati Shikha, Sharma Gulati JL and Manocha, Shagun,, 1st Edn., CBS Publishers & Distributors , (2017)
7. Valency and Bonding. Weinhold, F.; Landis, C. Cambridge. (2005) pp. 96-100.
8. "Principles of inorganic Chemistry", B. R. Puri . L. R. Sharma and K. C. Kali Mile. Stone Publishers and Distributor, Delhi, 31st edition, 2013.
9. Inorganic Chemistry: Shriver and Atkins, Oxford 4th edition. (2003)

**Course Outcomes:**

**Unit - I : After completion of unit, Student are able to**

- 1] Understand Basic concept of reagent, Preparation and physical of reagents.
- 2] Understand Mechanism of reagents, Applications of reagents.
- 3] Understand Statement, General Reaction, Mechanism and Synthetic applications of Name reaction

**Unit - II : After completion of unit, Student are able to**

- 1] Solve Examples of addition reactions and understand Mechanism of electrophilic addition to  $>C=C<$  bond, orientation & reactivity,
- 2] Understand Hydroxylation & Hydrogenation
- 3] Understand Mechanism of electrophilic addition to  $'C\alpha'C'$  bond.
- 4] Understand Addition of halogens. Addition of halogen acids Addition of hydrogen. Addition of water

**Unit - III : After completion of unit, Student are able to**

- 1] Define and solve examples of Acids and Bases.
- 2] Understand Classification of acids and bases, Hard and Soft Acids and Bases. (HSAB Concept)
- 3] Define and classification of solvents.
- 4] Understand Acid-Base reactions in Liquid Ammonia and Liquid Sulphur Dioxide.

**Unit - IV : After completion of unit, Student are able to**

- 1] Understand Coordination Chemistry Inorganic Reaction mechanism.
- 2] Understand Mechanism of substitution in octahedral complexes. Tran's effect and its theories, Applications of Trans effect.
- 3] Understand Shapes of d-orbitals, Basic assumptions of CFT, CFT of d-orbitals of metal ion.
- 4] Understand Limitations of CFT, Merits and demerits of MOT

\*\*\*\*\*

**BNTP - 509: Chemical Science Lab**

**Credit: 02**

**Course Objectives: Students should**

- 1] Perform Gravimetric estimation from the given solution.
- 2] Learn Preparation of various compounds.
- 3] Determine the percentage purity.
- 4] Analyzing Commercial Sample.
- 5] Determine Qualitative analysis.
- 6] Learn Organic Estimations: Qualitative analysis
- 7] Learn Organic Estimations: Quantitative analysis
- 8] Study Organic preparation.
- 9] Study Organic preparation of derivatives.

**Experiments:**

**A] INORGANIC CHEMISTRY**

**I] Gravimetric Estimations (G).**

**N. B. Any two experiments from G1 to G3 and any one experiment from G4 & G6.**

- G1. Gravimetric estimation of iron as ferric oxide ( $\text{Fe}_2\text{O}_3$ ) from the given solution containing ferrous ammonium sulphate, copper sulphate and free sulphuric acid.
- G2. Gravimetric estimation of zinc as zinc pyrophosphate from the given solution containing zinc sulphate, ferrous ammonium sulphate and free sulphuric acid.
- G3. Gravimetric estimation of barium as barium sulphate ( $\text{BaSO}_4$ ) from the given solution containing barium chloride, ferric chloride and free hydrochloric acid.
- G4. Gravimetric estimation of barium as barium chromate ( $\text{BaCrO}_4$ ) from the given solution containing barium chloride, ferric chloride and free hydrochloric acid.
- G5. Gravimetric estimation of nickel as bis (dimethylglyoximate) nickel (II) from the given solution containing nickel sulphate, ferrous ammonium sulphate and free Sulphuric acid.
- G6. Gravimetric estimation of aluminium as aluminium oxinate potassium tris (8-hydroxy quinolato) aluminium (III) from the given solution containing potash alum, copper sulphate and free sulphuric acid.

[For the gravimetric experiments, stock solution should be given in the range of 10 to 15  $\text{cm}^3$  and asked to dilute to 100  $\text{cm}^3$  (or the stock solution should be given in the range of 20 to 30  $\text{cm}^3$  and asked to dilute to 250  $\text{cm}^3$ ). Use 50  $\text{cm}^3$  of this diluted solution for estimation.]

**II] Inorganic Preparations (P).**

**N. B. At least two preparations from the following with percentage yield:**

- P1. Preparation of potassium trioxalato aluminate (III).
- P2. Preparation of Tetra ammine copper (II) chloride.
- P3. Preparation of tris(thiourea) copper (I) sulphate.
- P4. Preparation of potassium trioxalato ferrate (III).
- P5. Preparation of chloropenta-ammine cobalt (III) chloride.
- P6. Preparation of ammonium diamminetetraamminechromate (III) (Reineck's salt).
- P7. Preparation of Potassium hexa nitro cobaltate (III).
- P8. Preparation of ammonium trioxalato chromate (III).
- P9. Preparation of hexathiourea plumbus (II) nitrate.

**A] Percentage Purity**

**N. B.: Any one from the following.**

- V1. Determination of percentage purity of ferrous ammonium sulphate.
- V2. Determination of percentage purity of tetrammine copper (II) sulphate.
- V3. Determination of percentage purity of potassium (trioxalato-aluminate) (III).

**B] Analysis of Commercial Sample.**

**N. B. Any one from the following :**

- V5. Determination of percentage of Calcium in the given sample of milk powder or lime.
- V6. Determination of amount of aluminum in the given solution of potash alum
- V7. Determination of titrable acidity in the given sample of milk or lassi.
- V8. Determination of percentage purity of boric acid using supplied sodium hydroxide.  
(Standard succinic or oxalic acid solution to be prepared to standardise the given sodium hydroxide solution.)
- V9. To determine the amount of HCl in given of commercial samples.

**B] ORGANIC CHEMISTRY**

**I] Qualitative analysis**

Separation of binary mixture and Identification of one component.  
(At least 08 mixtures)

Nature	1] Solid – Solid	: 4 mixtures
	2] Solid – Liquid	: 2 mixtures
	3] Liquid – Liquid	: 2 mixtures

**1] Solid – Solid Mixtures :**

One mixture from each the following types should be given:

- |                     |                    |
|---------------------|--------------------|
| i] Acid + Phenol    | ii] Acid + Base    |
| iii] Acid + Neutral | iv] Phenol + Base  |
| v] Phenol + Neutral | vi] Base + Neutral |

**2] Solid – Liquid Mixtures :**

One mixture from each the following types should be given:

- Neutral + Neutral
- Acid + Neutral

**3] Liquid – Liquid Mixtures :**

One mixture from each the following types should be given:

- Neutral + Neutral
- Base + Neutral should be

Given. Following compounds should be used for preparation of mixtures

- Acids: Benzoic acid, Phthalic acid, Salicylic acid, Cinnamic acid, Aspirin, Oxalic acid.
- Phenols :  $\alpha$  - naphthol,  $\beta$  - naphthol.
- Bases : o-nitroaniline, m-nitroaniline, p-nitroaniline, aniline, o-toluidine and N, dimethylaniline.
- Neutrals : Anthracene, acetanilide, m-dinitrobenzene, chloroform, carbon tetrachloride, acetone, nitrobenzene, ethyl acetate, ethyl benzoate, bromobenzene, urea and thiourea.

**NB:**

- For Solid-Liquid and Liquid-Liquid mixtures avoid detection of type of mixture. Instead the weightage is given to detection of nature and separation of mixture.
- Separation and qualitative analysis of the binary Mixtures should be carried out on microscale using microscale kits.

**II] Quantitative analysis: Organic Estimations :[ Any two]**

1. Estimation of sucrose
2. Saponification value of oil.
3. To determine the amount of acid and amide present in the given mixture of acid and amide.
4. Determination of Molecular weight of monobasic/dibasic acid by volumetric method.
5. Estimation of unsaturation –to estimate the percentage purity of given olefinic compound by bromination method.

**Note : Double burette method should be used for titration.**

**III] Organic Preparations :[Any two]**

1. Multicomponent reaction - Preparation of Dihydropyrimidone.
2. Radical coupling reaction - Preparation of 1, 1, 2 bis-2naphthol.
3. Base catalyzed Aldol condensation- Preparation of Dibenzal propanone.
4. Diels Alder reaction- Reaction between Furan and Maleic acid
5. Benzil- Benzilic acid rearrangement reaction
6. Oxidation reaction – Preparation of Methyl phenyl sulfone.

**IV] Preparation of Derivatives: (Any two)**

1. Picrate derivative (naphthalene and  $\alpha$ -naphthol).
2. Iodoform (Acetone).
3. Osazone of Carbohydrates (Glucose).
4. Oxalate derivative (of Urea).
5. Nitrate derivative of Urea
6. 2, 4-Dinitro phenyl hydrazone (carbonyl compounds)
7. Oxime derivatives (carbonyl compounds)

**OR**

**Determination of structure of organic compound from given NMR spectra.**

Ethanol, Ethyl acetate, Benzyl alcohol, Propanoic acid, Butanal, Ethyl benzoate, Isopropyl benzene, Propyl ether, n-pentane, Propene, Diethyl amine, 2-chloro butane.

NB : All preparations should be carried out by considering green Chemistry approach

1. Preparation of derivative should be carried out on small scale. The starting compound should not be given more than one gram.

2. Calculation of percentage practical yield in preparation is must.
3. Recrystallization of crude product and its melting point.
4. The product should be confirmed by TLC.
5. Assign reactions with mechanism.

**Reference Books :**

1. Elementary Practical Organic Chemistry, Part 1: Small scale Preparations, Vogel, A. I. Pearson (2011)
2. Practical Organic Chemistry, Mann, F.G. & Saunders, B.C. Pearson Education (2009)
3. Practical Organic Chemistry, Furniss, B.S.; Hannaford, A.J.; Smith, P.W.G.; Tatchell, A. R. 5th Ed., Pearson (2012)
4. Comprehensive Practical Organic Chemistry Preparation and Quantitative Analysis, Ahluwalia, V.K. & Aggarwal, R. University Press (2000).
5. Comprehensive Practical Organic Chemistry: Qualitative Analysis, Ahluwalia, V.K. & Dhingra, S. University Press (2000).
6. Practical Organic Chemistry, Mann, F.G. & Saunders, B.C. Pearson Education (2009)
7. Practical Organic Chemistry, Furniss, B.S.; Hannaford, A.J.; Smith, P.W.G.; Tatchell,
8. Qualitative Inorganic Analysis, Svehla, G. Vogel's Pearson Education, 2012.
9. Quantitative Chemical Analysis, Mendham, J. Vogel's Pearson, 5th Ed., Pearson (2012)

**Course outcomes:**

**After completion of the Experiment, Students will be able to**

1. Know Importance of chemical safety and Lab safety while performing experiments in laboratory
2. Learn measuring skills in practical.
3. Understand theoretical concepts by performing experiments.
4. Develop awareness of minimizing errors.
5. Handle various instruments.

\*\*\*\*\*

**BNTT - 503 : Fundamentals of Enzymology and Nanoenzymology**  
**Lectures - 45, Credit - 2**

**Course objectives : Students should :**

- 1] Understand basic concept of enzyme.
- 2] Study types of enzymes.
- 3] Study Enzyme kinetics.
- 4] Study Electrophoresis techniques like PAGE.
- 5] Study the chromatographic techniques.
- 6] Study application of Nanoenzymes.

**Unit - 1 :**

**[10 lectures]**

**Classification and Properties :**

Introduction: Definition, Basic terminologies, Classification, Nomenclature and Physico-chemical properties of enzymes, IUB system. Concepts of active site, binding site, enzyme-substrate complex, activation energy, Transition State Theory. Effects of pH, temperature and substrate concentration on enzyme activities.

**Unit - 2 :**

**[12 lectures]**

**Enzyme Kinetics**

Enzyme Kinetics: Introduction: Michaelis - Menten Equation form and derivation, steady state enzyme kinetics, Significance of  $V_{max}$  and  $K_m$

Enzyme activity: Specific activity, turnover number

Enzyme inhibition: types of inhibitors-competitive, noncompetitive and uncompetitive, feedback inhibition. Enzyme immobilization: Methods and significance

**Unit - 3 :**

**[15 Lectures]**

**Biochemical Techniques**

Introduction: Sub-cellular fractionation, Methods of lysis for plants, animals and microbial cells Centrifugation: Basic principle, Types and Importance

Electrophoresis: SDS and Native PAGE, Staining techniques

Chromatographic Techniques: Ion exchange, Gel filtration chromatography, Partition chromatography, Affinity chromatography, Paper chromatography, Thin Layer Chromatography.

**Unit - 4 :**

**[10 Lectures]**

**Concept of nanoenzymes :**

Nanozymes in bionanotechnology, Natural enzymes, artificial enzymes, nanoenzymes, Various nanomaterial based nanoenzymes, Applications of nanoenzymes for sensing and

imaging, nucleic acid sensing, as aptasensors, for immunoassay, for detection of cells and bacteria, for imaging, Nanoenzymes for therapeutics,

3. Biochemistry by David Rawn, Joanna Cotler Books, 1983
4. Biochemistry Donald Voet Judith Voet. 4th edition Paperback, 2018
5. Fundamentals Of Enzymology, by Nicholas C. Price 3rd Edition Paperback 2009
6. Wilson and Walker's principles and techniques of biochemistry and molecular biology by Hofmann 8ed (sae), pb 2018
7. Enzyme Nanoparticles: Preparation, Characterisation, Properties and Applications Book by Chandra S. Pundir, 2015.
8. Nanozymes Sci. China Life Sci. created by learning from nature, Zhang, R., Fan, K. & Yan, X. (2020).
9. Nanozymes: Next Wave of Artificial Enzymes. Springer Briefs in Molecular Science. doi:10.1007/978-3-662-53068-9. Wang, X., Guo, W., Hu, Y., Wu, J., & Wei, H. (2016).

**Course Outcomes :**

**Unit - I : After completion of the unit Students will be able to :**

- 1] Understand basic classification of Enzymes.
- 2] Understand the Properties of Enzymes

**Unit - II : After completion of the unit Students will be able to :**

- 1] Understand Enzyme kinetics for Enzyme activity.
- 2] Understand enzyme inhibition and immobilization.

**Unit - III : After completion of the unit Students will be able to :**

- 1] Understand the DNA and RNA separation through Electrophoresis.
- 2] Understand various chromatographic techniques.

**Unit - IV : After completion of the unit Students will be able to :**

- 1] Understand application of nanoenzyme.
- 2] Understand the types of nanoenzymes.

\*\*\*\*\*

**BNTP-510: Biotechnology Lab**

**(Credits: 02)**

**Course objective : Student should :**

- 1] Study the inhibitory action on enzymes.
- 2] Study the activity of enzymes.
- 3] Study the inhibitory action on enzymes.
- 4] Study about bioinformatics.

**Experiments :**

- 1] Qualitative estimation of starch by iodine and Benedict test
- 2] Identification and quantitation of activity of alphaamylase/ beta amylase/ cellulase/ amyloglucosidase/ invertase/ alkaline phosphatase salivary /microbial / animal/plant source].
- 3] Determination of specific activity
- 4] Determination of activity in presence of activators.
- 5] Determination of activity in presence of inhibitors
- 6] Determination of optimum pH
- 7] Determination of optimum temperature
- 8] Determination of  $K_m$  and  $V_{max}$  Determination of Competitive, non-competitive inhibitors
- 9] Getting an amino acid sequence, nucleotide sequence and BLAST
- 10] Multiple sequence alignment
- 11] Structure analysis: secondary, tertiary and quaternary structure, bond angle, bond length, different interactions Ras-Mol, Kinemag.

**References :**

1. Wilson and Walker's principles and techniques of biochemistry and molecular biology by Hofmann 8ed (sae), pb 2018
2. Basic Biochemical Methods 2nd ed by R.R. Alexander and J.M. Griffith
3. Biochemical Methods 2nd ed. by S. Sadasivam and A. Manickam
4. A Textbook of Practical Biochemistry by David Plummer McGraw Hill Education; 3 edition, 2017.
5. Laboratory Manual in Biochemistry by S. Jayaraman. APC, 3<sup>rd</sup> edition, 2018.

**Course Outcomes :**

**After completion of experiments, Students will be able to**

- 1] Understand the activity of enzyme.
- 2] Understand the inhibitor of enzyme.
- 3] Understand the activator of enzyme.
- 4] Understand the bioinformatics techniques.
- 5] Use RasMol software to study protein structure

\*\*\*\*\*

**BNTT - 504: Science at nanoscale: Synthesis of Nanomaterials**

**(Lectures: 45, Credit- 2)**

**Course Objectives : Students should :**

- 1] Study the basic knowledge of nanoscience and technology
- 2] Study the different types of nanomaterials
- 3] Study the top down method for synthesis of nanomaterials
- 4] Study the thin film technology
- 5] Study the Bottom up method for nanoparticle's synthesis
- 6] Study the principle of different microscopies

**Unit - 1 :**

**[13 Lectures]**

**Introduction to Nanoscience**

Introduction to Nanoscale, Nanomaterials, Nanoscience and Nanotechnology. Nanoscience effects: Quantum size effects, Quantum confinement effect, Bohr exciton radius, surface area to volume ratio etc. The development of nanoscale science: scaling up approach, scaling down approach, Generations of nanotechnology/ Nanotechnology Timeline: Pre-18<sup>th</sup> Century, 19<sup>th</sup> Century, 20<sup>th</sup> Century, 21<sup>st</sup> Century. Nano and Nature: Lycurgus Cup, stained glass windows, Damascus saber blades, Nanoscopic colours (Butterfly wings), Bioluminescence (fireflies), Tribology, Nano tribology (Gecko's Sticky Feet, Nasturtium Leaf-Lotus effect etc.) in nature. Classification of nanomaterials: 0D, 1D, 2D and 3D and types of nanomaterials (QDs, QW, CNT's, Bucky Balls, etc.) Nanocomposites: Types of nanocomposites and applications. Brief applications of nanomaterials / Consumer products: Television, Energy, Automobile, Textile, Space, Defense and Engineering etc.

**Unit - 2 :**

**[11 Lectures]**

**Top down method : Lithography**

Overview of top down nanofabrication processes. Mechanical methods: Mechanical grinding (ball milling), Lithographic methods: Types of lithography techniques i.e. photolithography, electron beam lithography, X-ray lithography, Nano-imprint lithography. Thin film technologies: Thermal methods: Thermal evaporation, e-beam evaporation. Plasma methods: DC and RF Magnetron Sputtering, High-energy methods: Pulsed Laser Deposition Physical vapor deposition method etc. Advantages and disadvantages of Top down approaches

**Unit - 3 :**

**[12 Lectures]**

**Bottom up method: Vapor – phase synthesis**

Overview of bottom up nanofabrication processes. Growth mechanism: nucleation and growth of nanomaterials: Ostwald Ripening, sintering. Vapor – phase synthesis: Chemical vapor deposition (CVD): Types of CVD process, Atomic Layer Deposition, Molecular beam epitaxy (MBE), Inert gas condensation, Spray Pyrolysis, Flame pyrolysis. Liquid-phase synthesis: Colloidal methods: Metal and semiconducting nanoparticles, Solution precipitation, Electrodeposition, Sol-gel technique: Introduction. Sol-gel process: synthesis of Aerogel, Xerogel, sol-gel coating processes. Hydrothermal synthesis, Dip coating, spin coating, flow coating etc. Template synthesis of nano patterning. Advantages and Disadvantages of bottom up approaches.

**Unit - 4 :**

**[09 Lectures]**

**Visualization and manipulation tools**

Microscopy: Basics, Working principle and applications. Optical microscopy, Electron microscopy, scanning electrochemical microscopy (SECM): Construction and Working principle. Scanning Probe Microscope (SPM) techniques: Scanning Tunneling Microscopy (STM) and Atomic force microscopy. Optical Tweezers: Basics, Working principles and applications.

**Course Outcomes:**

**Unit - I : After completion of the unit, Students will be able to :**

- 1] Understand generations of nanotechnology.
- 2] Know nanoscopic structure present in natural materials.
- 3] Know dimensions based classification of nanomaterials.
- 4] Study application of nanocomposites.

**Unit - II : After completion of the unit, Students will be able to :**

- 1] Understand concept of synthesis of nanoparticles by using physical method.
- 2] Study different lithographic techniques.
- 3] Understand thin film technologies.
- 4] Understand high energy methods for thin film synthesis.

**Unit - III : After completion of the unit, Students will be able to :**

- 1] Synthesize of nanoparticles by using bottom up methods.
- 2] Understand concept of growth mechanism of nanomaterials.
- 3] Understand vapor phase synthesis methods.
- 4] Study liquid phase synthesis methods.

**Unit - IV : After completion of the unit, Students will be able to :**

- 1) Understand advantages and disadvantages of bottom up method.
- 2) Know basics of microscopies.
- 3] Understand morphology of nanomaterials.
- 4] Understand optical tweezers method.

**Reference Books:**

6. Handbook of microscopy for nanotechnology by nanyao princeton university princeton, nj, usa zhong lin wang, Kluwer Academic Publishers, 2005.
7. Handbook of vacuum science and technology by dorothy m. Hoffman, Academic Press, 1998.

\*\*\*\*\*

**BNTP - 511: Nanoscience Lab Course - IV  
(Credit- 2)**

**Course Objectives : Students should :**

- 1] This practical course will provide student better understanding of different techniques for synthesis of nanoparticles
- 2] Gain knowledge in optimization of reaction conditions for synthesis of nanomaterials
- 3] Know the synthesis of nanoapartical by using biological material.
- 4] Study about the hardness of water.
- 5] Study about the oxygen demand of organisms.

**Practicals**

- 1] Synthesis of  $\text{Fe}_2\text{O}_3$  by Solvothermal method
- 2] Synthesis of silver nanoparticles by chemical method
- 3] Synthesis of  $\text{TiO}_2$  nanoparticles by using sol-gel method
- 4] Synthesis of  $\text{Fe}_2\text{O}_3$  by sol-gel method
- 5] Synthesis of ZnO nanorods by hydrothermal method
- 6] Synthesis of Graphene oxide by modified Hummers method
- 7] Synthesis of Polyaniline nanofibers by CBD method
- 8] Synthesis of CdS nanoparticles by SILAR method
- 9] Synthesis of Nickel ferrite by hydrothermal method
- 10] Preparation of superhydrophobic nanocoatings by spin coating method.
- 11] Synthesis of silver nanoparticles by using plant material.
- 12] Synthesis of silver nanoparticles by using fungi.
- 13] Synthesis of silver nanoparticles by using bacteria.
- 14] Environmental Sampling methods and analytical preparations
- 15] Air pollution monitoring and analysis
- 16] Determination of total alkalinity and acidity of a water sample.
- 17] Determination of Chemical Oxygen Demand.
- 18] Determination of Dissolved Oxygen and Biological Oxygen Demand
- 19] Determination total Hardness, Sulphates, Nitrates and Chlorides

**Reference Books:**

1. Instrumental Analysis Lab manual, M. J. Prushan. CHM 311, 2018.
2. Introduction to Nanotechnology Charles P. Poole Jr. and Franks. J. Qwens John Wiley and Sons.(2003)
3. Plenty of Room for Biology at the Bottom: An Introduction to Bionanotechnology., Ehud Gazit Imperial college Press 2007

## **B.Sc. Nanoscience and Technology**

4. Springer Handbook of Nanotechnology, Bharat Bhushan, Springer Verlag. (2007).
5. Nanofabrication towards biomedical application: Techniques, tools, Application and impact Challa S., S. R. Kumar, J. H. Carola, John Wiley and sons. 2006

### **Course Outcomes :**

#### **After completion of the unit, Students will be able to:**

- 1] Know principle and working of various synthesis method.
- 2] Have an idea about the growth mechanism of nanomaterials.
- 3] Use different nanoparticles synthesis methods.
- 4] Understand the synthesis of nanoparticle by using plants, fungi.
- 5] Understand the alkalinity and acidity of water.
- 6] Understand the Dissolved Oxygen and Biological Oxygen Demand.

\*\*\*\*\*

**BNTT – 505(Elective): Environmental Science  
(45 lectures, Credit- 2)**

**Course Objectives: Students should :**

- 1] Study the basic source of water and air pollution.
- 2] Study the Act's for water and Soil pollution.
- 3] Study the biosynthesis of nanoparticles from plants, fungi and Microorganisms.
- 4] Study the Applied Nano-Technology.
- 5] Study the type of Environmental Sensors.

**Unit - 1 :**

**[10 lectures]**

**Water and Soil pollution**

Environmental pollutants in water & soil, hazardous and toxic wastes, waste water characteristics and parameters. Traditional water Treatment, nanomaterial Contamination in Aqueous Environmental, Ground water pollution, sources, effects, control, Current Nanotechnology for water treatment: Activated Carbon-A Simple Traditional Nanotechnology, Membranes and separation Technology. The Environment (Protection) Act, 1986, the Water (Prevention and Control of Pollution) Act, 1974.

**Unit - 2 :**

**[12 lectures]**

**Air pollution & Nano-toxicology**

Toxicity due to airborne Nanomaterials, Engineered nanomaterial's in the environment and Health Effects of Nanoparticles through Air, Absorption and pulmonary deposition of Nanoparticles, Elimination of dusts deposited in the lungs, Nanoparticles absorption mechanisms from air, Effects of ultrafine dusts. Gas Separation: Advanced Membrane Technology, Chemical Sensing and Detection. The Air (Prevention and Control of Pollution) Act, 1981.

**Unit - 3 :**

**[12 lectures]**

**Applied Nano-Technology**

The Environmental and Applied Nano-Technology Traditional Methods of Detecting, Environmental Contaminants, Type of Environmental Sensors, Sensing of chemical pollutants (Gas sensors: Introduction), basic sensing mechanism, application of TiO<sub>2</sub>, Solar Energy and Nanotechnology, Important characteristics and environmental applications of Mesoporous materials.

**Unit - 4 :**

**[11 lectures]**

**Green Nanotechnology**

Definition and principles of Green Chemistry and its significance, Biosynthesis of nanoparticles from plants, fungi & microorganisms and their application. Energy efficient resources and materials in Nanotechnology, Biological Sensors and Detectors and their applications Future aspects and importance of Nanotechnology in environmental conservation

**Reference:**

2. Waste water Engineering- treatment, Disposal and reuse, Metcalf and Eddy, Inc., Tata McGraw Hill, 1999
3. Environmental applications of nanomaterials: synthesis, sorbents and sensors, 2nd edition, Glen E Fryxell, Guozhonga Cao, Imperial College Press.
4. Nanotechnology for Environmental Engineering, Springer International Publishing, Ratul Kumar Das Vinayak Laxman Pachapur Linson Lonappan Volume 1 / 2016 - Volume 4 / 2019.
5. Environmental Chemistry, A.K. De, Wiley Eastern Ltd, New Delhi, 2003
6. Water and waste water analysis (Handbook of methods in environmental studies Col.1 by S. K. Maiti, ABD Publication, Delhi, ISBN-978-81-8577-34-07

**Course Outcomes:**

**Unit - I : After completion of the unit, Students will be able to:**

- 1] Understand source of water pollution.
- 2] Know the Act's for water pollution.

**Unit - II : After completion of the unit, Students will be able to:**

- 1] Understand source of Air pollution.
- 2] Know the Act's for Air pollution.

**Unit - III : After completion of the unit, Students will be able to:**

- 1] Understand Applied Nano-Technology
- 2] Understand Type of Environmental Sensors

**Unit - IV : After completion of the unit, Students will be able to:**

- 1] Understand Biosynthesis of nanoparticles from plants.
- 2] Understand Biosynthesis of nanoparticles from fungi.

\*\*\*\*\*

**BNTT – 506 (Elective): Application of nanomaterials: Carbon Nanostructures**  
**(45 lectures, Credit- 2)**

**Course Objectives : Students should :**

- 1] Study the basic knowledge of carbon nanomaterials.
- 2] Study the allotropes of carbon.
- 3] Study the how to synthesis carbon nanomaterials.
- 4] Study the properties of carbon nanomaterials
- 5] Study the synthesis of graphene
- 6] Study the applications of carbon nanomaterials

**Unit - 1 :**

**[11 lectures]**

**Allotropes of Carbon**

Diamond – Graphite – Graphene – Fullerenes – Metallofullerenes – Solid C60 – Bucky onions – Carbon nanotubes (CNT): Single walled carbon nanotubes, Multi-walled carbon nanotubes – Carbon dots – Carbon nanocones – Carbon nanohorns – Nanodiamond – Stability of carbon phases at nanolevel: Phase diagram.

**Unit - 2 :**

**[10 lectures]**

**Synthesis of Carbon Nanostructures**

Ultra high vacuum chamber: Pumps- Gauges – Arc discharge method: CNT- fullerene – Chemical vapor deposition: Graphene- CNT- various gases precursors – Pulsed laser deposition: CNT- Laser pulse-target interactions – Thermal flash deposition – Mechanical- chemical- thermal exfoliation of graphene.

**Unit - 3 :**

**[11 lectures]**

**Properties of Carbon Nanostructures**

Chemical reactivity – Electrical conductivity – Thermal conductivity – Mechanical strength – Electron field emission – High aspect ratio – Light emission – Biocompatibility – Dispersion – Cytotoxicity – Anti-microbial effect – Molecular carriers.

**Unit - 4 :**

**[13 lectures]**

**Applications**

Energy storage devices – Quantum computers – Antioxidants – Polymer electronics – Environmental protection – Food processing & packaging – Agrotechnology – Nanosensors – Biosystems – Drug delivery – Tissue engineering – Nanorobots – Cell tracking & labeling – Molecular motors – Cosmetics.

**Course Outcomes:**

**Unit - I : After completion of the unit, Students will be able to :**

- 1] Understand basic of carbon allotropes.
- 2] Know different types of carbon.

**Unit - II : After completion of the unit, Students will be able to :**

- 1] Understand concept of synthesis of carbon nanomaterials by using vapor deposition technique.
- 2] Study thermal evaporation synthesis method.

**Unit - III : After completion of the unit, Students will be able to :**

- 1] Know mechanical strength of carbon nanomaterials.
- 2] Understand light emission in carbon materials.

**Unit - IV : After completion of the unit, Students will be able to :**

- 1] Understand application of carbon nanomaterials in energy storage device.
- 2] Know how to apply carbon nanomaterials in bio system.

**SECC - BNTT - 507 : Skill Enhancement Compulsory Course  
Scientific and Technical Writing - I  
(Lectures:15, Credit:01)**

**Course Objectives : Students should**

- 1] Motivate towards research
- 2] Study to write research paper
- 3] Learn to present their project work

**Unit - 1 : Types of Writing :**

Scientific articles, research papers and proposals

**Composition:**

Title, paragraph writing, Introduction, Writing main body, figures and tables, referencing, plagiarism, Abstracts, summary writing

**Unit - 2 : Style :**

Objectivity, clarity, formality, hedging, signposting

**Assignment - I :**

Present any paper from Nature Nanotechnology or Nature Journal.

**Reference Books:**

- 1] Practical handbook for scientific and technical writers, Z. Svobodova et al. L, Da Vinci Program, European Commission
- 2] The fine art of technical writing by C. R. Perry, Createspace publisher.

**Course Outcomes:**

**After completion of this course students will be able to**

- 1] Understand types of scientific writing
- 2] Understand concept of plagiarism checking
- 3] Understand Abstracts, summary writing
- 4] They are able to present paper

**SECC-BNTP- 512: Project Work  
Credit: 02**

\*\*\*\*\*

**B.Sc. Part - III Semester -VI**  
**BNTT - 601: Solid state physics, Nuclear Physics**  
**(Lectures - 45, Credit - 2)**

**Course objectives: Students should :**

- 1] Study atomic structure's
- 2] Learn properties of matter and its application
- 3] Understand band structure of solids
- 4] Learn crystal imperfections
- 5] Learn properties of nucleus.

**Unit : 1**

**[05 lectures]**

**Atomic Structures**

Revision of Rutherford, Bohr atomic model, The hydrogen spectrum, Somerfield's relativistic atom model, elliptical orbits of hydrogen, vector atom model, The Pauli's Exclusion principle.

**Unit : 2**

**[16 lectures]**

**Properties of matter.**

Introduction, classical free electron theory of metals, quantum theory of free electrons, classical. Wave equation, Schrodinger's wave equation and its importance, electrical. Conductivity from quantum mechanical. Consideration thermal Conductivity.

**Crystal imperfection**

Introduction, Point defects, Vacancies, Schottky defects and Frankel defects, derivation for no. of vacancies in crystal, Compositional defect, Electronic defect, Line imperfection, Screw dislocation, Burger vector, Surface imperfections, Grain boundaries, Twin boundaries, Stacking defects.

**Unit : 3**

**[8 lectures]**

**Elementary Band Theory of Solids**

Concept of density of states, Bloch theorem (statement only), Kroning-Penny model, Origin of energy gap, Velocity of electrons according to band theory, Effective mass of an electron, Distinction between metals, semiconductors and insulators, Hall Effect - Hall voltage and Hall Coefficient.

**Unit : 4**

**[16 lectures]**

**General Properties of Nuclei and Nuclear Model**

Constituents of nucleus and their intrinsic properties, Quantitative facts about size, mass, charge density (matter energy), binding energy, average binding energy and its variation

with mass number, Liquid drop model approach, Semi empirical mass formula, Magic numbers.

### Particle Physics

Particle interactions, Classification of elementary particles, Symmetries and conservation laws- energy, momentum, angular momentum and parity, Baryon number, Lepton number, Concept of quark model.

23. Concept of modern physics by Arthur Beiser, Tata McGraw- Hill publishing company ltd. New Delhi, 10<sup>th</sup> edition 1994.
24. Atomic and nuclear structure by D. K. JHA, Discovery publishing house New Delhi, 2004.
25. Nuclear energy by D. K. JHA Discovery publishing house, New Delhi, 2004
26. Nuclear physics by S. N. Ghoshal, S. Chand & company Ltd, Ram Nagar New Delhi, 2008.

### **Course Outcomes :**

#### **Unit – I : After completion of the unit, Students will be able to :**

- 1] Understand atomic structure
- 2] Understand experiments done by scientists to define closest structure of atom and drawbacks of their theories

#### **Unit – II : After completion of the unit, Students will be able to :**

- 1] Understand Types of matter
- 2] Analyze effects of pressure, temperature etc on the formation of matter and its properties.
- 3] Solving problems related to thermal, electrical properties
- 4] Understand Change in properties of solids due to defects
- 5] Calculate number of vacancies created in solid structures.

#### **Unit – III : After completion of the unit, Students will be able to:**

- 1] Band structures in solids
- 2] Differences between metals, semiconductor and insulators
- 3] Analyze Hall effect.

#### **Unit – IV : After completion of the unit, Students will be able to:**

- 1] Get knowledge of Intrinsic Nuclear properties
- 2] Calculate binding energy
- 3] Understand various particles present in nucleus
- 4] Understand Importance of nuclear particles

\*\*\*\*\*

**BNTP-608 -Solid state physics and nuclear physics  
(Credits-02)**

**Course Objectives : Students should :**

- 1] Determine properties of solid
- 2] Learn to analyze hysteresis curve
- 3] Determine hall effect
- 4] Study characteristics of Solar cell

**Experiments**

1. Measurement of resistivity of given thin film using two probe method
2. Thermal conductivity of metal using Searle's apparatus
3. Hysteresis using CRO
4. Surface tension of mercury
5. Study of bandgap energy using semiconductor diode
6. IV characteristics of solar cell
7. Polar graph using photocell
8. Study of temperature transducer
9. Hall effect
10. Determination of density and mobility of charge carriers in p- germanium

**Reference Books**

1. Advanced Practical Physics for Students, B. L. Worsnop, H. T. Flint, Asia Publ. House., 1971
2. Practical Physics, S. L. Gupta and V. Kumar, Pragati Prakashan., (27th Ed.), 2010.
3. An Advanced course in Practical Physics, , D. Chattopadhyay and P. C. Rakshit, New Central Book Agency, (10th Ed.), 2011.
4. . Experimental College Physics, White and Manning, McGraw-Hill Book Comp., (3rd Ed.), 1954.
5. . B.Sc. Practical Physics, H. Singh and P.S. Hemne, S. Chand Publication, (4th Ed.), 2011.
6. . Practical Physics, C.L. Arora, S. Chand Publication, 2010.

**Course Outcomes :**

## **B.Sc. Nanoscience and Technology**

**After completion of the experiments, Students will be able to:**

- 1] Understand methods for analyzing properties of solids
- 2] Measure thermal conductivity
- 3] Measure hall voltage and charge density using Hall effects instrument
- 4] Understand effects of intensity of light on current and voltage of solar cell
- 5] Measure magnetic susceptibility of materials
- 6] Handle various instruments with ease

\*\*\*\*\*

**BNTT - 602: Physical & Organic chemistry  
(Lectures: 45, Credit-2)**

**Course Objectives : Students should :**

1. Study Chemical bonding and basis of reactivity.
2. Study concepts of aromaticity.
3. Learn Structure and stability of reactive intermediates.
4. Study Aliphatic Nucleophilic substitutions reaction & Elimination reaction.
5. Study the all reactions in chemical kinetics, Simultaneous reactions, Opposing reaction, and Side reaction. Consecutive reactions, Chain reaction, explosive reaction.

**Unit - 1 :**

**[15 lecture]**

**Reaction Mechanism: Structure and Reactivity**

- a] Types of reactions, Chemical bonding and basis of reactivity-Chemical bond, delocalization, conjugation, resonance, hyper conjugation, tautomerism, inductive effects.
- b] Aromaticity: Structural, thermochemical, and magnetic criteria for aromaticity, including NMR characteristics of aromatic systems. Benzenoid and non-benzenoid compounds, Huckel's rule, antiaromaticity, Application to carbocyclic and heterocyclic systems, azulenes, tropylium cations, metallocenes, current 2
- c] Structure and stability of reactive intermediates, carbenes, nitrenes, carbocations, carbanions and free radicals.

**Unit - 2 :**

**[15 lecture]**

**A] Aliphatic Nucleophilic substitutions:**

The  $S_N2$ ,  $S_N1$  and  $S_Ni$  reactions with respects to mechanism and stereochemistry. Nucleophilic substitutions at an allylic, aliphatic trigonal, benzylic, aryl and vinylic carbons. Reactivity effect of substrate structure, effect of attacking nucleophiles, leaving groups and reaction medium.  $S_N$  reactions at bridge head carbon, competition between  $S_N1$  and  $S_N2$ , Ambident nucleophiles, Neighbouring Group Participation.

**B] Elimination Reactions :**

The E1, E2 and E1cB mechanisms. Orientation in Elimination reactions. Hoffman Versus Saytzeff elimination, competition between substitution and elimination reactions, Reactivity: effects of substrate structures, attacking base, the leaving group, the nature of medium on elimination reactions.

**Unit - III :**

**[07 lectures]**

**Chemical Kinetics**

Introduction. Simultaneous reactions such as: Opposing reaction: (Derivation of rate equation for first order opposed by first order expected) Side reaction. Consecutive reactions. Chain reaction. Explosive reaction (Derivation of rate equation and Numerical problems are not expected).

**Unit - IV :**

**[08 lectures]**

**Photochemistry**

Introduction, Difference between thermal and photochemical processes. Laws of photochemistry: i] Grotthus - Draper law ii] Lambert law iii] Lambert – Beer's law (with derivation) iv] Stark-Einstein law. Quantum yield, Reasons for high and low quantum yield. Factors affecting Quantum yield. Photosensitized reactions – Dissociation of H<sub>2</sub>, Photosynthesis. Photodimerisation of anthracene. Jablonski diagram depicting various processes occurring in the excited state:

3. Organic Chemistry by Morrison & Boyd, Pearson Education India. 7th Edn, 2010
4. Organic Chemistry, Jonathan Clayden, Nick Greeves, Stuart Warren, 2nd Edition, Oxford Publisher, 2014.
5. Textbook of Physical chemistry, P. L. Sony, O. P. Dharmarha, U.N. Das by Sultan Chand and S. publication. 2003
6. Principle of physical chemistry Puri Sharma, Patania by Vishal publishings. Co. 44th

edition

7. Physical Chemistry by Ira N. Levine Published by McGraw-Hill Science August 29th 2001
8. Physical Chemistry by David W. Ball Published by Brooks Cole d August 20th 2002
9. Physical Chemistry – P.W. Atkins, Oxford University press, 8th edition, 2006.

**Course Outcomes :**

**Unit - I : After completion of the unit, Students will be able to**

1. Understand organic reaction mechanism with respect to structure and reactivity.
2. Know concepts of aromaticity.
3. Know structure and stability of reactive intermediates

**UNIT - II : After completion of the unit, Students will be able to**

1. Understand formation of various types of Aliphatic Nucleophilic substitutions.
2. Understand to compare  $SN_2$ ,  $SN_1$  and  $SN_i$  reactions with respects to mechanism and stereochemistry.
3. Know ambient nucleophiles, Neighboring Group Participation

**Unit - III : After completion of the unit, Students will be able to :**

1. Understand all reactions in chemical kinetics,
2. Understand derivation of rate equation.

**Unit - IV : After completion of the unit, Students will be able to :**

1. Understand difference between thermal and photochemical processes, Laws of photochemistry
2. Understand relation between Photosensitized reactions, Photosynthesis.

\*\*\*\*\*

**BNTP - 609: Lab Course II: Chemistry  
(Credit- 2)**

**Course Objectives : Students should**

1. Perform accurate quantitative measurements with and understanding of the theory and use contemporary chemical instrumentation,
2. Interpret experimental result and perform the calculation
3. Learn to present scientific and technical information resulting from laboratory experimentation in both written and oral formats.
4. Study non instrumental experiments.
5. Study instrumental experiments.

**PRACTICALS**

**I] Non instrumental Experiments :**

**A] Any two of the following**

**i] Partition Law.**

To determine the partition coefficient of  $\text{CH}_3\text{COOH}$  between  $\text{H}_2\text{O}$  and  $\text{CCl}_4$ .

**ii] Viscosity.**

To determine the viscosity average molecular weight of a polymer.

**iii] Adsorption.**

To investigate the adsorption of oxalic acid by activated charcoal and test the validity of Freundlich & Langmuir isotherms.

**iv] Solubility.**

To study the effect of addition of electrolyte ( $\text{NaCl}$  or  $\text{KCl}$ ) on the solubility of Benzoic acid at room temperature.

**B] Chemical kinetics. (Any two)**

1. The study of energy of activation of first order reaction i.e. hydrolysis of methyl acetate in presence of  $0.5 \text{ N HCl} / 0.5 \text{ NH}_2\text{SO}_4$ .
2. The study of energy of activation of second order reaction i.e. reaction between  $\text{K}_2\text{S}_2\text{O}_8$  and  $\text{KI}$  (Equal concentrations).
3. The study of energy of activation of second order reaction i.e. reaction between  $\text{K}_2\text{S}_2\text{O}_8$  and  $\text{KI}$  (Unequal concentrations).
4. To study the hydrolysis of methyl acetate by using its two concentrations in presence of  $0.5 \text{ N HCl}$  and hence find velocity constant of the reaction.
5. To study the effect of addition of electrolyte ( $\text{KCl}$ ) on the reaction between  $\text{K}_2\text{S}_2\text{O}_8$  and  $\text{KI}$  (Equal concentrations).

**C] Partial molar volume.**

1. To determine the partial molar volume of ethyl alcohol in a mixture of ethyl alcohol and water (Any seven mixtures be given).

**II] Instrumental experiments**

**A] Potentiometry (Any two)**

1. Titration of strong acid with strong alkali

N.B.

- i] 8 to 10 ml of 1N acid solution to be given by examiner in 100 ml volumetric flask & student should dilute it to 100 ml and 10 ml of this solution is taken for titration.
  - ii] Experiment is carried out by taking pilot run from 1 to 10 ml and then final run taking 0.2 ml reading in the range of endpoint.
2. Preparation of buffer solution and determination of their pH (Any five buffer solutions). Theoretical calculation of pH values by using Henderson's equation.
  3. Determination of standard electrode potential of Zn / Zn<sup>++</sup>, Cu / Cu<sup>++</sup>, Ag / Ag<sup>+</sup> (Any two).
  4. Estimate the amount of Cl<sup>-</sup>, Br<sup>-</sup> and I<sup>-</sup> in given unknown halide mixture by titrating it against standard AgNO<sub>3</sub> solution.
  5. Titration of ferrous ammonium sulphate using K<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub> solution and to calculate redox potential of Fe<sup>++</sup>, Fe<sup>+++</sup> system.

**B] Conductometry (Any two).**

N.B.

- i] 8 to 10 ml of 1N acid solution to be given by examiner in 100 ml volumetric flask & student should dilute it to 100 ml and 10 ml of this solution is taken for titration.
1. Titration of a mixture of weak acid and strong acid with strong alkali
  2. To study the effect of substituent on dissociation constant of weak acid with respect to acetic acid and monochloroacetic acid (cell constant to be given).

N.B.

- Calculate K by using formula  $K = \frac{2.C}{1 - \square}$
3. To determine the velocity constant of hydrolysis of ethyl acetate by NaOH solution by conductometric method.
  4. To determine the normality of citric acid in lemon by titrating it against standard 0.2N NaOH solution by conductometric method.
  5. To determine  $\epsilon^{\circ}$  of strong electrolyte (NaCl or KCl) and to verify Onsager equation.

**C] Refractometry. (Any One)**

1. To determine the percentage composition of unknown mixture by  
(i) graphical method and  
(ii) by composition law (Densities of pure liquids A & B be given).
2. To determine the molar refractivity of methyl acetate, ethyl acetate, n-hexane and carbon tetrachloride and calculate the refraction equivalents of C, H and Cl atoms.

**D] Colorimetry (Any Two).**

1. To verify Lambert – Beer's law using  $\text{CuSO}_4$  solution.
2. To estimate of  $\text{Fe}^{+++}$  ions by thiocyanate method.
3. To estimate  $\text{Fe}^{+++}$  ions using salicylic acid by colorimetric titration.
4. To determine the order of reaction for the oxidation of alcohol by potassium dichromate and potassium permanganate in acidic medium calorimetrically.

**E] pH – Metry (Any One).**

1. To determine the dissociation constant of monobasic acid (Acetic acid).
2. To determine the dissociation constant of dibasic acid (Malonic acid).
3. To determine hydrolysis constant of aniline hydrochloride.

**Reference books:**

1. **A. Senior Practical Physical Chemistry**, Khosla, B. D.; Garg, V. C. & Gulati, R. Chand & Co. New Delhi (2011).
2. **Comprehensive Practical Organic Chemistry**, Ahluwalia, V. K. & Renu Agarwal Orient Black Swan (2004)
3. **Experiments in Physical Chemistry** Garland, C. W.; Nibler, J. W. & Shoemaker, D. P. McGraw-Hill: New York 8th Ed. (2003).
4. **Experimental Physical Chemistry** Halpern, A. M. & McBane, G. C. W.H. Freeman & Co. New York 3rd Ed.; (2003).

**Course Outcomes :**

**After completion of the Experiment, Students will be able to**

1. Learn measuring skills in practical.
2. Understand theoretical concepts by performing experiments.
3. Develop awareness of minimizing errors.
4. Handle various instruments.

\*\*\*\*\*

**BNTT- 603 Molecular biology and genetic engineering  
(Lectures: 45, Credits: 02)**

**Course Objectives : Students should**

- 1] Study the structure of DNA.
- 2] Study the prokaryotic and eukaryotic replication.
- 3] Study the process of Transcription.
- 4] Study the process of translation.
- 5] Study the PCR technique.
- 6] Study the Recombinant DNA technology.

**Unit : 1**

**[11 lectures]**

**Nucleic acid and DNA Replication**

**Nucleic acid :**

History, nucleic acid as genetic material. Nucleic Acid Structure and Chemistry, nitrogenous bases, purine and pyrimidine bases Sugar-Phosphate Chain Conformations, Base Pairing, Base Stacking, Hydrophobic and Ionic Interactions. Different forms of DNA, A form, B, form, Z form. Other Functions of Nucleotides.

**DNA Replication :**

An Overview, Replication Forks, Role of DNA Gyrase, Semi discontinuous Replication, RNA Primers. Enzymes of Replication, DNA polymerase I, DNA Polymerase III Unwinding DNA: Helicases and Single-Strand Binding Protein, DNA Ligase, Primase, Topoisomerase,

**Prokaryotic Replication:**

Escherichia coli, Fidelity of Replication

**Eukaryotic Replication :**

The Cell Cycle, Eukaryotic Replication Mechanisms, Reverse Transcriptase, telomeres and Telomerase. Repair of DNA, Direct Reversal of Damage, Excision Repair, Mismatch Repair, the SOS Response, Double-Strand Break Repair Identification of Carcinogens.

**Unit : 2**

**[12 lectures]**

**Transcription :**

The Role of RNA in Protein Synthesis, Enzyme Induction, Messenger RNA. RNA Polymerase, Template Binding, Chain Initiation, Chain Elongation, Chain Termination Eukaryotic RNA Polymerases

**Translation :**

The Genetic, Nature of the Code, Codons. Transfer RNA and Its Aminoacylation, Primary and Secondary Structures of tRNA, Tertiary Structure of tRNA Aminoacyl-tRNA Synthetases, Codon–Anticodon Interactions, Nonsense Suppression Ribosomes and Polypeptide Synthesis: Ribosome Structure, Polypeptide **Synthesis**: An Overview, Chain Initiation Chain Elongation, Translational Accuracy, Chain Termination, Protein Synthesis Inhibitors: Antibiotics

**Unit : 3**

**[15 lectures]**

**Nucleic Acids and Allied Techniques**

Isolation of DNA from plants, animals and microbial sources, Isolation of plasmid DNA, PCR: Introduction, Principle, Working, Uses Blotting techniques: Southern and Western Blotting DNA sequencing: Sanger's method, Maxam-Gilbert method. Recombinant DNA Technology

**Enzymes involved :** Taq polymerase, Restriction endonucleases, Exonucleases, End modification enzymes, Ligases

**Vectors:** Properties of a good vectors, Plasmids, Phages, Cosmids, Artificial vectors, Animal Virus derived vectors

**Transformation:** Chemical and physical methods, Role of Agrobacteria (Ti and Ri plasmids) Construction of cDNA libraries, Cloning libraries Applications of Recombinant DNA Technology: Transgenics and their applications in Medicine, Agriculture and Veterinary science

**Unit : 4**

**[7 lectures]**

**Nanoparticles for nucleic acid delivery**

Nanoparticles for DNA delivery, Nanoparticles for mRNA delivery, Nanoparticles for gene editing. Lipid based nanoparticles, Gold nanoparticles based delivery, Chitosan nanoparticles based delivery, solid lipid nanoparticles based delivery, and composite nanoparticles based delivery

**References:**

9. DNA Science: A First Course in Recombinant Technology, D.A. Mickloss and G.A. Freyer, Cold Spring Harbor Laboratory Press, New York, 1990

### **Course Outcomes:**

#### **Unit - I : After completion of the unit, Students will be able to:**

- 1] Get knowledge of Genetic Material.
- 2] Understand Replication process for cell division.

#### **Unit - II : After completion of the unit, Students will be able to:**

- 1] Understand about the RNA synthesis.
- 2] Understand protein synthesis from RNA.

#### **Unit - III : After completion of the unit, Students will be able to:**

- 1] Understand various blotting technique.
- 2] Understand PCR reaction for DNA amplification.

#### **Unit - IV : After completion of the unit, Students will be able to:**

- 1] Understand use of nano in molecular biology.
- 2] Understand use of nanoparticles in mRNA delivery system.

\*\*\*\*\*

**BNTP- 610: Lab Course IV: Molecular biology and genetic engineering**  
**(Credits: 02)**

**Course Objectives : Students should :**

- 1] Learn the DNA Isolation process.
- 2] Perform DNA separation by using electrophoresis.
- 3] Perform transformation in bacteria.
- 4] Study the separation of protein.
- 5] Perform DNA amplification by using PCR.

**Practicals**

- 1] Isolation of DNA from bacterial, plant and fungal sources
- 2] Quantitative estimation of DNA (spectrophotometer).
- 3] Separation of DNA by Agarose Gel Electrophoresis
- 4] Demonstration of PCR
- 5] Amplification of DNA by PCR
- 6] Preparation of competent cells
- 7] Plasmid Transformation in competent cells.
- 8] Isolation of plasmids by miniprep method
- 9] Isolation of plasmids by midiprep method.
- 10] Isolation of RNA
- 11] Isolation of proteins
- 12] Separation of proteins by SDS PAGE
- 13] Separation of proteins by Native PAGE
- 14] Demonstration of DNA sequencer

**References:**

1. Methods in Molecular Biology by Sambrook and Russel
2. Practical Biochemistry: An Introductory Course by Fiona Fraiss
3. Methods in Enzymology Vol. I by S.P. Colowick and N.O. Kaplan eds.
4. Basic Biochemical Methods by R.R. Alexander and J.M. Griffith, 2nd edition.
5. Biochemical Methods by S. Sadasivam and A. Manickam, 2nd edition.
6. Hawk's Physiological Chemistry by Bernard L Oser
7. A Textbook of Practical Biochemistry by David Plummer McGraw Hill Education; 3rd edition, 2017.
8. Laboratory Manual in Biochemistry by S. Jayaraman. APC, 3rd edition, 2018.

**Course Outcomes :**

**After completion of the unit, Students will be able to:**

- 1) Know the DNA Isolation process.
- 2) Understand DNA separation by using electrophoresis.
- 3) Perform transformation in bacteria.
- 4) Understand the separation of protein.
- 5) Perform DNA amplification by using PCR.

\*\*\*\*\*

**BNTT - 604: Science at nanoscale: Properties of Nanomaterials  
(Lectures: 45, Credit- 2)**

**Course Objectives : Students should :**

- 1] Study the physical properties of nanomaterials
- 2] Study the mechanical properties of nanomaterials
- 3] Study the electrical properties of nanomaterials
- 4] Study the optical properties of nanomaterials
- 5] Study the magnetic properties of nanomaterials

**Unit - 1:**

**[10 Lectures]**

**Physical Properties of Nanomaterials :**

Mechanical Characterization – Plastic deformation, Toughness, Stiffness, Ductility, modulus and load carrying capability, fatigue – abrasion and wear resistance etc. Stress-Strain Curve. Hardness of nanomaterials: nanoindentation. Nanomachines. Mechanical properties of CNT. Micro Electro mechanical Systems (MEMS), Nano Electromechanical Systems (NEMS). Thermodynamics of Nanomaterials: Melting point and phase transition processes at nanoscale materials. Classical thermodynamics Vs Nano thermodynamics.

**Unit - 2 :**

**[12 Lectures]**

**Electronic Properties of Nanomaterials :**

Density of states of 3D, 2D, 1D and 0D dimensional nanostructures. Clusters of metals and semiconductors, nanowires. Size-induced metal-insulator-transition (SIMIT). Electronic transport in 1,2 and 3 dimensions. Effective mass. Drude conduction of metals - mean free path in 3D-diffusive transport and ballistic conduction. Coulomb blockade. Single electron transistors (SET), Tunnel diodes: Esaki tunneling diode (ETD), Resonant tunneling diode (RTD). Fundamentals of electrical conductivity in carbon nanotubes. CNT based transistor, electrical conductivity of nanocomposites.

**Unit - 3 :**

**[12 Lectures]**

**Optical properties of Nanomaterials :**

Interaction of light with matter: Absorption- Emission. Direct and indirect band gap

transitions, radiative-nonradiative process, photoluminescence. Surface Plasmon: Interaction of light with metal, scattering, extinction. Difference between Surface Plasmon Resonance (SPR) and Localized Surface Plasmon Resonance (LSPR). Origin of color generation from metal nanoparticles, Size and Shape dependent optical properties of metal nanoparticles. Applications of nano-plasmonics. Quantum dots (QDs): optical properties of QD nanomaterials. Size dependent band gap tuning: optical absorption and optical emission. Optical properties of core-shell nanomaterials. Optoelectronic applications of nanomaterials: detection, PV solar cells, photoelectrochemical cells, light emitting diodes supercapacitor, batteries etc.

**Unit - 4 :**

**[11 Lectures]**

**Magnetic properties of nanomaterials :**

Origin of magnetism in materials, Classification into Dia-, Para- and Ferro- magnetic materials, Hysteresis in ferromagnetic materials, domains, soft and hard magnetic materials, Coercivity vs particle size, Single domain particles, superparamagnetism, Exchange coupling in magnetic multilayers (RKKY Coupling), Giant Magnetoresistance (GMR), Origin of GMR, Oscillatory exchange coupling, spin valve, Magnetic Tunnel Junction (MTJ), Spin Field Effect Transistor (SFET).

**Course Outcomes :**

**Unit - I : After completion of the unit, Students will be able to :**

- 1] Get knowledge of physical properties of nanomaterials.
- 2] Know hardness of nano materials by using nanoindentation.
- 3] Get knowledge of mechanical properties of nanomaterials.
- 4] Understand thermodynamics of nanomaterials.

**Unit - II : After completion of the unit, Students will be able to :**

- 1] Get knowledge of electrical properties of nanomaterials.
- 2] Know concept of density of states.
- 3] Understand concept of quantum confinement.
- 4] Understand tunnel diodes.

**Unit - III : After completion of the unit, Students will be able to :**

- 1] Get knowledge of optical properties of nanomaterials.
- 2] Understand concept of Surface Plasmon Resonance.
- 3] Get knowledge of optical properties of core-shell nanomaterials.
- 4] Understand concept of quantum dots.

**Unit - IV : After completion of the unit, Students will be able to :**

- 1] Get knowledge of magnetic properties of nanomaterials.
- 2] Understand superparamagnetism.
- 3] Understand Exchange coupling in magnetic multilayers.
- 4] Know applications of nanomaterials in magnetism.

**Reference Books :**

\*\*\*\*\*

**BNTP - 611: Lab 4- Properties of nanomaterials  
(Credit- 02)**

**Course Objectives : Students should:**

- 1] Learn different characterization techniques
- 2] Study analysis of the materials by using characterization technique.
- 3] Study of evaluation of Paracetamol syrup.
- 4] Study of dissolution rate of some tablet formulations.

**Practical**

- 1] Structural properties of nanomaterials by XRD
- 2] Analysis of surface morphology by AFM
- 3] Structural properties by STM
- 4] Quantum size effect in nanomaterials
- 5] Use of FT-IR for functional group identification (in CNT, graphene etc.)
- 6] Photoluminescence study of nanomaterials
- 7] Determination of crystallite size using Scherrer formula
- 8] Mechanical properties of nanomaterials
- 9] Determination of average particle size by frequency distribution curve
- 10] Surface area to volume ratio of nanosphere and nanowires using TEM image.
- 11] Collection of data on various editions of IP, gross additions and deletions per edition and sources of some commonly available drugs.
- 12] Determination of saturation and Biopharmaceutics solubility of some drugs.
- 13] Preparation and evaluation of Paracetamol syrup.
- 14] Studies on dissolution rate of some tablet formulations.
- 15] Determination of degree of hydrolysis of given ester.
- 16] Synthesis of metal nanoparticles using synthetic/green route
- 17] Preparation of nanoformulation and its evaluation.

**Reference Books:**

6. Instrumental Analysis Lab manual, M. J. Prushan. CHM 311, 2018.
7. Introduction to Nanotechnology Charles P. Poole Jr. and Franks. J. Qwens John Wiley and Sons.(2003)
8. Plenty of Room for Biology at the Bottom: An Introduction to Bionanotechnology., Ehud Gazit Imperial college Press 2007
9. Springer Handbook of Nanotechnology, Bharat Bhushan ,Springer Verlag.(2007).
10. Nanofabrication towards biomedical application: Techniques, tools, Application and impact Challa S., S. R. Kumar, J. H. Carola, John Wiley and sons.2006

**Course Outcomes :**

**After completion of the unit, Students will able to :**

- 1] Know principle and working of various characterization techniques.
- 2] Get knowledge about the crystal structure of materials by using XRD.
- 3] Understanding the structural properties by using STM.
- 4] Calculate the surface area of colloidal materials by using image of TEM.
- 5] Know about the evaluation of Paracetamol syrup.
- 6] Understand the dissolution rate of some tablet formulations.

\*\*\*\*\*

**BNTT-605: Nanomedicine  
(Lectures: 45, Credits: 02)**

**Course Objectives : Students should :**

- 1] Study the biological nanostructure.
- 2] Study biological polymer.
- 3] Study of nanoformulation.
- 4] Study the concept of nanodrug.

**Unit :1 [12 Lectures]  
Nanobiology and Nanomedicine**

Introduction to Nanobiology and Nanomedicine Nanobiology – Introduction. Biological Nanostructures and natural biological assemblies at nanoscale: Bacterial S layers, phospholipid membranes, viruses, Nucleic acids, Oligosaccharides, polysaccharides, biological polymers, Proteins. Biological nanomotors, protein assemblies: Kinesin and dynein, cilia. Bacterial flagella: structure and function; nano motor. Ion channels: nanopores of high specificity. Bioinspired nanomaterials: DNA and peptide based. Interaction between biomolecules and nanoparticle surfaces.

**Unit : 2 [13 Lectures]  
Synthesis of Nanomaterials and nanoformulations**

Characterization techniques for nanomaterials. Nanobioassemblies : Different types of inorganic materials used for the synthesis of hybrid nanobio Assemblies. Concept of drug and formulation/dosage form. Physicochemical and biological properties of drugs. Routes of dosage form administration. Formulation of nanocrystals, nanoemulsions, polymeric micelles. Introduction to liposome and solid lipid nano particles (SLN). Fate of nanoformulations in body.

**Unit :3 [10 Lectures]  
Nanomedicine**

Applications of nano in biology. Concept of disease, Cause and molecular/cellular progression of key diseases including infectious, inherited diseases, immunological diseases and cancer. Approach to developing nanomedicines. Various kinds of nanosystems in use.

**Unit : 4 [10 Lectures]  
Nanodrug**

Nanodrug administration nanodevices for drug delivery and theranostics. Introduction to the potentials, applications and challenges of nanomedicine. Nanomedicine and tissue engineering, nanobiomachines and nanorobots.

**References:**

8. Nanoscale Technology in Biological Systems. Ralph S. Greco, Fritz B. Prinz, R. Lane Smith (Editors) CRC Press (2004)

**Course Outcomes :**

**Unit - I : After completion of the unit, Students will be able to:**

- 1] Understand the concept of Biological Nanostructures.
- 2] Understand the Biological nanomotors.

**Unit - II : After completion of the unit, Students will be able to :**

- 1] Understand the concept of Nanobioassemblies.
- 2] Understand the properties of drugs.

**Unit - III : After completion of the unit, Students will be able to :**

- 1] Understand the cellular progression.
- 2] Understand the developing nanomedicine.

**Unit - IV : After completion of the unit, Students will be able to:**

- 1] Understand the challenges of nanomedicine.
- 2] Understand the concept of Nanodrug administration

\*\*\*\*\*

**BNTT – 606 (Elective): Application of Nanomaterials : Nanocatalysis  
(Lectures: 45, Credits: 02)**

**Course Objectives : Students should :**

- 1] Study the basic concept of nanocomposites.
- 2] Study the surface science.
- 3] Study the nanoporous catalysis.
- 4] Study the nanophotocatalysis.
- 5] Study the gold nanocrystal catalysis
- 6] Study the applications of nanocatalysis.

**Unit : 1**

**[11 Lectures]**

**Surface Science and Heterogeneous Catalysis**

Adsorption- Thermodynamics and statistical mechanics of adsorption- Structure of solid surfaces and adsorbed layers- Mechanism of surface reactions; Heterogeneous catalysts: Catalytic activity- Active sites- Activation energy- Conversion- Selectivity- Contact time- TOS- Promoters- Stabilizers- Poison- Catalyst Deactivation; Chemisorptions on metals-metal oxides and semiconductors.

**Unit : 2**

**[10 Lectures]**

**Synthesis of Nanoporous Catalysts**

Microporous materials: Zeolites- Zeotypes – Overall steps in zeolite crystallization- Zeolite synthesis via.- dry gel route- Zeolite Y- determination of surface acidity- shape-selectivity; Mesoporous aluminosilicates: Synthesis of Mesoporous Silica- MCM-41- SBA-15; Aluminophosphates; Mesoporous Carbon- Sulfated Zirconia- Ag/SiO<sub>2</sub> composite nanocatalysts.

**Unit : 3**

**[11 Lectures]**

**Nanophotocatalysis and Catalysis of Gold nanocrystals**

Introduction to photocatalysis: Principle- Band energy engineering- Degradation of dye- Hydrogen generation- Organic synthesis. Gold catalysts: Uniqueness- particle size- Metalsupport interaction; Preparative methods: Co-precipitation- Deposition-Precipitation- Impregnation- Photodeposition- bimetallic catalysts; Properties- Selective oxidation & reduction reactions.

**Unit : 4**

**[13 Lectures]**

**Applications of Nanocatalysts**

Environmental protection; Energy processing: Processes involved in crude oil refinery- Gasoline production- Cracking- Fuel cell- Biomass gasification- Biodiesel- Naphtha

reforming; Energy conversion & storage; Synthesis of fine chemicals- Hydrogenation/ dehydrogenation- Synthetic fuels- Selective oxidation reactions- Polymerization.

**Course Outcomes:**

**Unit - I : After completion of the unit, Students will be able to :**

- 1] Understand reaction of surface mechanism.
- 2] Know chemisorption on metals.

**Unit - II : After completion of the unit, Students will be able to :**

- 1] Understand concept of microporous materials
- 2] Study synthesis of microporous materials.

**Unit - III : After completion of the unit, Students will be able to:**

- 1] Study basic concept of photocatalysis.
- 2] Understand Metal support interaction Preparative methods.

**Unit - IV : After completion of the unit, Students will be able to:**

- 1] Understand application of nanocatalysis.
- 2] Know synthesis of fine chemicals

**SECC - BNNT - 607 : Scientific and Technical Writing - II**

**Lectures 15 : Credit 01**

**Course Objectives : Student should**

- 1] Learn to read and understand research articles
- 2] Learn to write research article

**Unit - 1 : Language functions :**

Agreeing disagreeing, classifying, comparing, contrasting, defining, emphasizing, generalizing, paraphrasing and quoting.

**Grammar :**

Adverbs, articles, numbers, passive voice, punctuation, verbtenses, word order

**Words :**

Abbreviations, prefixes and suffixes

**Unit - 2 : Assignment - II : Writing of research article**

**Reference Books:**

- 3] Practical handbook for scientific and technical writers, Z. Svobodova et al. L, Da Vinci Program, European Commission
- 4] The fine art of technical writing by C. R. Perry, Createspace publisher.

**Course Outcomes :**

**After completion of this course, students are able to write research articles**

\*\*\*\*\*

**SECC-BNTP-612: Project work**

**(Credits 02)**

- 1] Students should submit project report
- 2] Certificate of paper presentation
- 3] Research paper presented

## B.Sc. Nanoscience and Technology

\*\*\*\*\*

### Evaluation Scheme B.Sc-III Nanoscience and technology Semister V

Course Code	Name of the course	ESE	Internal Exams		Course code	Practical		Submission		Total
			ISE-I	ISE-II		Exam	Journal	Case study/ Educational tour/seminar	Day to Day perform ance	
BNTT-501	Mathematical Physics, Classical Mechanics and Quantum Mechanics	40	05	05	Physical Science Lab	35	05	05	05	100
BNTT-502	Organic and Inorganic chemistry	40	05	05	Chemical science lab	35	05	05	05	100
BNTT-503	Fundamentals of Enzymology and Nanoenzymology	40	05	05	Biotechnol ogy lab	35	05	05	05	100
BNTT-504	Science at Nanoscale: Synthesis of Nanomaterials	40	05	05	Nanotechn ology Lab	35	05	05	05	100
BNTT-505	Environmental Science	40	05	05	--	--	-	-	-	50
SECC-BNTT-507	Skill Enhancement compulsory paper-Scientific paper writing	20			Project	30				50
AECC-2	English	40	05	05	-	-	-	-	-	50

## B.Sc. Nanoscience and Technology

**Total Sem V**

**550**

### Evaluation Scheme B.Sc-III Nanoscience and technology Semester VI

Course Code	Name of the course	ESE	Internal Exams		Course code	Practical		Submission		Total
			ISE-I	ISE-II		Exam	Journal	Case study/ Educational tour/seminar	Day to Day perform ance	
BNTT-601	Solid state physics, Nuclear Physics	40	05	05	Physical Science Lab	35	05	05	05	100
BNTT-602	Physical & Organic chemistry	40	05	05	Chemical science lab	35	05	05	05	100
BNTT-603	Molecular biology and genetic engineering	40	05	05	Biotechnology lab	35	05	05	05	100
BNTT-604	Science at nanoscale: Properties of Nanomaterials	40	05	05	Nanotechnology Lab	35	05	05	05	100
BNTT-605	Nanomedicine	40	05	05	--	--	-	-	-	50
